In conjunction with World Environment Day 2017

Venue : Indian Science Congress Association Auditorium

14, Dr. Biresh Guha Street, Kolkata, 700017, India

A clean environment is essential for human health and well-being. Environmental health comprises those aspects of human health, including quality of life, that are determined by physical, biological, social, and psychosocial factors in the environment. The interactions between the environment and human health are highly complex phenomenon. The well versed health impacts are related to different types of pollution (air, water, noise, chemical etc.). The change in environment resulting in depletion of stratospheric ozone, loss of biodiversity, and land degradation also affect human health indirectly.

The UN General Assembly designated June 5 as World Environment Day in 1972, marking the first day of the landmark Stockholm Conference on the Human Environment. Another resolution adopted the same day led to the creation of the UN Environment Programme (UNEP).

The World Environment Day- 2017 theme is 'Connecting People to Nature'.
